

Code Review Standards & Best Practices

Applicable Roles: DEVELOPER

Purpose

Code reviews ensure code quality, knowledge sharing, and catch bugs early. Every PR must be reviewed by at least one peer before merging to main.

What to Look For

Review checklist:

- Correctness: Does the code do what it's supposed to?
- Security: Any vulnerabilities? (SQL injection, XSS, auth flaws)
- Performance: Efficient algorithms? N+1 queries?
- Maintainability: Clear naming? Comments where needed?
- Test coverage: Unit tests for new logic?
- Style: Follows project style guide?

PR Guidelines

Pull Request best practices:

- Keep PRs small (<400 lines ideally)
- Descriptive title and description
- Link to JIRA ticket
- Add screenshots for UI changes
- Self-review before requesting review
- Respond to comments within 24 hours

Review Etiquette

- Be respectful and constructive
- Ask questions, don't dictate
- Explain reasoning for suggestions
- Approve if comments are minor/non-blocking
- Use 'Request Changes' for blocking issues only
