

Performance Monitoring & KPIs

Applicable Roles: DEVOPS, DEVELOPER

Key Metrics to Monitor

- Response time (p50, p95, p99)
- Error rate (target <0.1%)
- Request throughput (RPS)
- CPU/Memory usage
- Database query performance
- Cache hit ratio
- API endpoint health

Alerting Rules

Set up alerts for:

- p99 latency > 1s for 5 min
- Error rate > 1% for 2 min
- CPU > 80% for 10 min
- Disk space < 20%
- SSL certificate expiry < 30 days

APM Setup

Application Performance Monitoring:

- Auto-instrument key libraries
- Trace critical user journeys
- Log correlation IDs across services
- Set up distributed tracing
- Create dashboards per service
