

QA Testing Process & Standards

Applicable Roles: QA

Test Planning

At the start of each sprint:

- Review user stories and acceptance criteria
- Identify test scenarios
- Estimate testing effort
- Define test data requirements
- Create test cases in test management tool

Test Case Format

Each test case should include:

- Test case ID and title
- Preconditions
- Test steps (numbered)
- Expected results
- Test data
- Priority (P0-P3)
- Automation status

Test Execution

Testing workflow:

1. Smoke tests on every build
2. Sanity testing for bug fixes
3. Regression testing before release
4. Exploratory testing for new features
5. Performance testing for critical flows

Bug Lifecycle

New -> Triage -> Assigned -> In Progress -> Fixed -> Verified -> Closed

Test Metrics

Key QA metrics to track:

- Test coverage percentage
- Pass/fail rate
- Bug find rate (bugs per test hour)
- Regression defect percentage
- Mean time to detect (MTTD)
- Mean time to resolve (MTTR)
